1 QUESTIONS

1.1 WHAT IS THE RELATIONSHIP BETWEEN A GUEST OPERATING SYSTEM AND A HOST OPERATING SYSTEM IN A SYSTEM LIKE VMWARE? WHAT FACTORS NEED TO BE CONSIDERED IN CHOOSING THE HOST OPERATING SYSTEM?

A guest operating system is the OS installed on the VMware. The host operating system is the OS installed on the computer and interacts with the hardware. The guest operating system allows you to run programs that are not compatible with the host OS. Some factors that need to be taken into consideration when choosing a host OS are the hardware, it will be running on, the memory, and what you need to use it for.
